Test plan for signing in to your Youtube account using your Google account

1. Running tests for different browsers (e.g. Chrome, Firefox, Safari, Edge) and different devices (e.g. desktops, laptops, smartphones, tablets)
2. Checking that the 'Sign in' button is easily accessible on the Youtube homepage
3. Checking that when the user clicks on the "Login" button, they are taken to the login page
4. Checking that the "Sign in with Google Account" option is available on the sign-in page
5. Verification that after clicking the option "Sign in with Google account" the user is transferred to the Google account sign-in page
6. Checking that after entering the correct details (email address and password) the user is taken back to the youtube page and is logged into their account
7. Checking that after re-entering the youtube site, the user is still logged in and does not need to log back into the site
8. Checking that the user is able to add a video to their channel, comment on a video, play their playlist, subscribe to their channel, when signed in with their Google account
9. Checking that the user is able to log out of their Youtube account when signed in with their Google account
10. Checking that the user is no longer logged in to their Youtube account when they unlink their Google account.
11. This test plan should be modified and tailored to the specific needs of the project, but should include basic steps to help verify that logging in with a Google account is working correctly
